## Contents

|                   |     |
|-------------------|-----|
| CONTRIBUTORS..... | v   |
| PREFACE.....      | vii |

### Methods for Measuring the Velocity of Moving Particles under the Microscope

P. A. G. MONRO

|  |    |
|--|----|
| I. Introduction.....                             | 1  |
| II. Visual Techniques.....                       | 6  |
| III. Photographic Techniques.....                | 24 |
| IV. Integrated Photo-electronic Techniques ..... | 28 |
| V. Summary.....                                  | 30 |
| References.....                                  | 39 |

### Accurate Microscopical Determination of Optical Properties on One Small Crystal

CHARLES PROFFER SAYLOR

|  |    |
|--|----|
| I. Introduction.....   | 42 |
| II. Necessary Steps for Determining a Characteristic Refractive Index                        | 44 |
| III. Procedure for Orientation and Recognition of the Principal Vibration<br>Directions..... | 46 |
| IV. Matching of the Index with Liquid.....   | 57 |
| V. Recognizing the Condition of Match.....   | 65 |
| VI. Determining the Index of Refraction of the Liquid.....                                   | 69 |
| VII. Co-ordination of Properties.....  | 70 |
| VIII. Evaluation.....  | 71 |
| References.....  | 76 |

### Image Contrast and Phase-modulated Light Methods in Polarization and Interference Microscopy

ROBERT D. ALLEN, JAMES W. BRAULT AND ROBERT M. ZEH

|   |     |
|---|-----|
| I. Phase Retardation Measurements in Polarization and Interference<br>Microscopy..... | 77  |
| II. The Theory and Application of Phase-Modulation Methods .....                      | 89  |
| III. The Design of an Instrument for Quantitative Microscopy—The<br>PAR System.....   | 101 |
| References. ....  | 113 |

## Past and Present Attempts to Attain the Resolution Limit of the Transmission Electron Microscope

E. RUSKA

|   |     |
|---|-----|
| I. The Limits of Resolving Power and the Sources of Aberrations . . . . . | 116 |
| II. The Single-Field Condenser-Objective . . . . .                        | 137 |
| III. Movement of the Image during Photographic Exposure . . . . .         | 150 |
| IV. Lack of Sharpness of the Image . . . . .                              | 153 |
| V. Changes in the Specimen . . . . .                                      | 154 |
| VI. Self-Structure of Supporting Films . . . . .                          | 171 |
| References . . . . .  | 178 |

## The Response of Photographic Emulsions to Electrons

ROBIN C. VALENTINE

|  |     |
|--|-----|
| I. Introduction . . . . .                                | 180 |
| II. The Photographic Process . . . . .                   | 181 |
| III. Optical Density of the Processed Emulsion . . . . . | 182 |
| IV. Contrast . . . . .                                   | 190 |
| V. Speed . . . . .                                       | 192 |
| VI. Electron Range in Emulsions . . . . .                | 192 |
| VII. Number of Grains per Electron . . . . .             | 194 |
| VIII. Graininess . . . . .                               | 195 |
| IX. Electron Diffusion . . . . .                         | 198 |
| X. Practical Conclusions . . . . .                       | 201 |
| References . . . . .                                     | 202 |

## The Struggle to Overcome Spherical Aberration in Electron Optics

ALBERT SEPTIER

|   |     |
|---|-----|
| I. Introduction . . . . .   | 204 |
| II. The Coefficient of Spherical Aberration . . . . .                 | 205 |
| III. The Search for Lenses with Little Spherical Aberration . . . . . | 209 |
| IV. Attempts to Correct the Aperture Aberration . . . . .             | 223 |
| V. Correction by means of Astigmatic Systems . . . . .                | 232 |
| VI. The Ultimate Performance of Corrected Systems . . . . .           | 263 |
| VII. Perspectives for the Future . . . . .                            | 269 |
| References . . . . .  | 272 |
| AUTHOR INDEX . . . . .  | 275 |
| SUBJECT INDEX . . . . .   | 279 |
