CONTENTS

Preface xiii

Summary 46
Suggested Readings 46

1 Process Geomorphology: An Introduction

Introduction	3
The Basics of Process Geomorphology	5
The Delicate Balance 5	
Force, Process, and Resistance: The Ingredients of Balance 7	
Driving Forces 9	
The Resisting Framework 12	
Thresholds and Complex Response 17	
The Principle of Process Linkage 19	
The Time Framework 20	
Summary 23	
Suggested Readings 23	

2 Internal Forces and Climate

Introduction	25
The Endogenic Effect	25
Epeirogeny 26	
Orogeny and Tectonic Geomorphology 30	
Volcanism 36	
Climatic Geomorphology	39
Climate, Process, and Landforms 39	
Climate Change and Geomorphic Response 40	
Sea-Level Fluctuation 42	
Geologic and Vegetal Screens 43	

3 Chemical Weathering and Soils

Introduction	49
Decomposition	50
Processes of Decomposition 53	
Oxidation and Reduction 53	
Solution 53	
Hydrolysis 53	
Ion Exchange 54	
Mobility 55	
Leaching 56	
pH 56	
The Eh Factor 57	
Fixation and Retardation 57	
Chelation 58	
The Degree and Rate of Decomposition 59	
Mineral Stability 59	
Secondary Minerals 59	
Estimates Based on Chemical Analyses 62	
Soils	63
The Soil Profile 64	
Soil Classification 67	
Pedogenic Controls and Regimes 70	
Podzolization 72	
Laterization 73	
Calcification 74	
The Factor of Time 75	
Geomorphic Significance of Soils 76	
Summary 82	
Suggested Readings 82	

4 Physical Weathering, Mass Movement, and Slopes

Introduction	85
Physical Weathering	85
Expansion of Rocks and Minerals	86
Thermal Expansion	86
Unloading	86
Hydration and Swelling	88
Salt Weathering	93
Growth in Voids	94
The Significance of Water and Interaction of Chemical and Physical Weathering Processes	96
Physical Properties of Unconsolidated Debris	98
Shear Strength	100
Internal Friction	100
Effective Normal Stress	100
Cohesion	101
Measurement of Strength	104
Mass Movements of Slope Materials	104
Slope Stability	105
Heave and Creep	108
Rockfalls	110
Slides	112
Flows	116
Morphology of Mass Movements	124
Slope Profiles	127
The Rock Climate Influence	130
Slope Evolution	132
Relict Hillslope Forms	133
Summary	134
Suggested Readings	135
5 The Drainage Basin—Development, Morphometry, and Hydrology	137
Introduction	137
Slope Hydrology and Runoff Generation	139
Infiltration	139
Subsurface Stormflow and Saturated Overland Flow	140
The Stream Hydrograph and Response to Basin Characteristics	143
Effect of Physical Basin Characteristics	144
Initiation of Channels and the Drainage Network	146
Basin Morphometry	150
Linear Morphometric Relationship	151
Areal Morphometric Relationships	153
Relief Morphometric Relationships	154
Basin Morphometry and the Flood Hydrograph	155
Basin Evolution	158
Basin Hydrology	162
Subsurface Water	163
The Groundwater Profile	163
Movement of Groundwater	163
Aquifers, Wells, and Groundwater Utilization Problems	165
Surface Water	167
Flood Frequency	168
Paleoflood Hydrology	171
Basin Denudation	176
Slope Erosion and Sediment Yield	176
Wash	177
Sediment Yield (Soil Loss)	178
Factors Affecting Sediment Yield	179
Sediment Budgets	186
Rates of Denudation	188
Summary	190
Suggested Readings	190

6 Fluvial Processes

Introduction	193
The River Channel	193
Basic Mechanics	193
Flow Equations and Resisting Factors	194
Sediment in Channels	197
Transportation	197
Entrainment	197
Bank Erosion	201
Deposition	204
The Frequency and Magnitude of River Work	204
The Quasi-Equilibrium Condition	205
Hydraulic Geometry	205
The Influence of Slope	208
Channel Shape	212
Channel Patterns	212
Straight Channels	213
Meandering Channels	215
Braided Channels	218
Anabranching Streams	221
The Continuity of Channel Patterns	222
Rivers, Equilibrium, and Time	223
Adjustment of Gradient	224
Adjustment of Shape and Pattern	227
Summary	228
Suggested Readings	228

7 Fluvial Landforms

Introduction	231
Floodplains	231
Deposits and Topography	231
The Origin of Floodplains	236
Fluvial Terraces	240
Types and Classification	241
The Origin of Terraces	242
Depositional Terraces	242
Erosional Terraces	243
Terrace Origin and the Field Problem	244

Piedmont Environment: Fans and Pediments

Alluvial Fans	247
Fan Morphology	248
Fan Deposits and Origins	253
Pediments	258
Morphology and Topography	259
Processes	261
Formative Models	262

Deltas

Delta Classification, Morphology, and Deposits	263
Delta Evolution	265
Summary	268
Suggested Readings	269

8 Wind Processes and Landforms

Introduction	271
The Resisting Environment	271
The Driving Force	274
Entrainment and Transportation	276
Processes	276
The Effect of Saltation	277
Erosional Features	279
Deposits and Features	282
Ripples	284
Dunes	285
Fine-Grained Deposits	291
Summary	295
Suggested Readings	295

9 Glaciers and Glacial Mechanics

Introduction	297
Glacial Origins and Types	297
The Mass Balance	301
The Movement of Glaciers	303

Internal Motion	303
Shear Maintenance	303
A Simple Model of Internal Flow	305
Extending and Contracting Flow	308
Sliding	309
Motion with Deforming Substrata	
Sediments	312
Velocity Variations with Time	313

Ice Structures

319

Stratification	319
Sessile Features	319
Foliation	319
Gneissosomes	319
Summary	319
Suggested Readings	319

10 Glacial Erosion, Deposition, and Landforms

Introduction

321

Erosional Processes and Features

321

Minor Subglacial Features	321
Cirques	323
Erosion by Cirque Glaciers	323
Uvalle Erosion	323
Glacial Thruhs	329

Deposits and Depositional Features

326

Drift Types	326
Unstratified Drift	326
Stratified Drift	328
The Depositional Framework	328
Marginal Ice-Contact Features	329
Waves	329
Stratified Marginal Features	329
Interior Ice-Contact Features	330
Ground Surfaces and Drumlins	330
Periglacial Features	330
Summary	351
Suggested Readings	352

11 Periglacial Processes and Landforms

Introduction

355

Permafrost and Ground Ice

356

Definition and Thermal Characteristics	356
Thickness, Thickness, and Origin	359
Morphology	362

Periglacial Processes

366

Frost Action	366
Frost Weathering	366
Frost Heaving and Thrusting	366
Frost Sorting	367
Frost Cracking	368
Mass Movements	369
Frost Creep	369
Sublimation (Subsidence)	370

Periglacial Landforms

372

Landforms Associated with Permafrost	372
Ice Wedges and Ice-Wedge Polygons	372
Tulipots	374
Thermokarst	375
Patterned Ground	376
Classification	376
Origin	380
Landforms Associated with Mass Movement	381
Stratified Slope Features	381
Ground-tilt Features	382
Rock Glaciers	383
Talus	385
Other Periglacial Features and Their Significance	388

Environmental and Engineering Considerations

389

Building Foundations	391
Roads and Airfields	391
Utilities: Water and Sewage	395
Mining	395
Implications for Global Warming	395
Implications to Humanitarian Services	395
Summary	399
Suggested Readings	399

Internal Motion	303
Basic Mechanics	303
A Simple Model of Internal Flow	305
Extending and Compressive Flow	308

Sliding	309
---------	-----

Motion with Deforming Subglacial Sediments	312
---	-----

Velocity Variations with Time	313
-------------------------------	-----

Ice Structures

315

Stratification	315
----------------	-----

Secondary Features	315
--------------------	-----

Foliation	315
-----------	-----

Crevasses	216
-----------	-----

Summary	319
---------	-----

Suggested Readings	319
--------------------	-----

10 Glacial Erosion, Deposition, and Landforms

Introduction

321

Erosional Processes and Features

321

Minor Subglacial Features	321
---------------------------	-----

Cirques	325
---------	-----

Erosion by Cirque Glaciers	326
----------------------------	-----

Headwall Erosion	329
------------------	-----

Glacial Troughs	330
-----------------	-----

Deposits and Depositional Features

334

Drift Types	334
-------------	-----

Nonstratified Drift	334
---------------------	-----

Stratified Drift	336
------------------	-----

The Depositional Framework	338
----------------------------	-----

Marginal Ice-Contact Features	340
-------------------------------	-----

Moraines	340
----------	-----

Stratified Marginal Features	344
------------------------------	-----

Interior Ice-Contact Features	345
-------------------------------	-----

Interior Moraine	346
------------------	-----

Fluted Surfaces and Drumlins	347
------------------------------	-----

Proglacial Features	349
---------------------	-----

Summary	351
---------	-----

Suggested Readings	352
--------------------	-----

11 Periglacial Processes and Landforms

Introduction

355

Permafrost and Ground Ice

356

Definition and Thermal Characteristics	356
--	-----

Distribution, Thickness, and Origin	359
-------------------------------------	-----

Hydrology	362
-----------	-----

Periglacial Processes

364

Frost Action	364
--------------	-----

Frost Wedging	365
---------------	-----

Frost Heaving and Thrusting	366
-----------------------------	-----

Frost Sorting	367
---------------	-----

Frost Cracking	369
----------------	-----

Mass Movements	369
----------------	-----

Frost Creep	369
-------------	-----

Solifluction (Gelifluction)	370
-----------------------------	-----

Periglacial Landforms

372

Landforms Associated with Permafrost	372
--------------------------------------	-----

Ice Wedges and Ice-Wedge Polygons	372
-----------------------------------	-----

Pingos	374
--------	-----

Thermokarst	376
-------------	-----

Patterned Ground

Classification	378
----------------	-----

Origin	380
--------	-----

Landforms Associated with Mass Movement

Stratified Slope Deposits	381
---------------------------	-----

Gelifluction Features	382
-----------------------	-----

Rock Glaciers	383
---------------	-----

Blockfields	385
-------------	-----

Relict Periglacial Features and Their Significance

Environmental and Engineering Considerations

389

Building Foundations	391
----------------------	-----

Roads and Airfields	391
---------------------	-----

Utilities: Water and Sewage	393
-----------------------------	-----

Pipelines	393
-----------	-----

Implications for Global Warming	395
---------------------------------	-----

Applications to Planetary Geology	395
-----------------------------------	-----

Summary	399
---------	-----

Suggested Readings	399
--------------------	-----

12 Karst—Processes and Landforms

Introduction	401
Definitions and Characteristics	401
The Processes and Their Controls	402
Karst Rocks—The Resisting Framework	402
Lithology	402
Porosity and Permeability	404
The Driving Mechanics and Controls	404
The Solution Process	404
Solution Rates—The Controlling Factors	406
Karst Hydrology and Drainage Characteristics	408
Surface Flow	408
Karst Aquifers and Groundwater Flow	408
The Relations Between Surface and Groundwater	410
Morphology of Karst Drainage	411
Surficial Landforms	413
Closed Depressions	413
Dolines	413
Doline Morphometry	416
Uvalas and Poljes	418
Karst Valleys	418
Allogenic Valleys	418
Blind and Dry Valleys	418
Pocket Valleys	419
Cockpit and Tower Karst	419
Limestone Caves	423
Cave Physiography	423
Entrances and Terminations	423
Passages and Passage Morphology	423
The Origin of Limestone Caves	425
Summary	427
Suggested Readings	427

13 Coastal Processes and Landforms

Introduction	429
Coastal Processes	431
Waves	432
Wave Generation	432
Wave Modification Near Coast	435
Tsunamis and Seiches	438
Tides and Currents	439
Tides	439
Nearshore Currents	441
Beaches	445
The Beach Profile and Equilibrium	445
Nearshore Bars	446
Beach Morphodynamics	448
Shoreline Configurations and Beach Landforms	453
Beach Cusps	455
Large-Scale Rhythmic Topography and Capes	457
Coastal Topography	459
High-Relief, Erosional Shorelines	460
Low-Relief, Depositional Shorelines	465
Shoreline Change	465
Rates of Change	466
Causes of Shoreline Erosion	468
Rising Sea Level	468
Coastal Storms	470
Barrier Islands	473
Distribution and Characteristics	473
Geomorphic Processes and Dynamics	476
Summary	483
Suggested Readings	483
Bibliography	485
Credits	521
Index	527
