Introduction	
A. Abbreviations and notations.....	5
B. Concept of the UNE geometry.....	7
C. The place of the UNE geometry in the theory of the spaces with projective metric.....	10
Chapter I. General structure of an UNE space	
1.1. Problem	13
1.2. Definitions of the notions : UNE space, local absolute, local space, irregular point, regular point	14
1.3. First fundamental theorem	15
1.4. Extension to the irregular points Definition of the base Definition of the basic space	21
1.5. Second fundamental theorem	23
1.6 Third fundamental theorem.....	30
1.7 Examples of the UNE spaces	35
Chapter II. Classification of the UNE spaces	
2.1. Fourth fundamental theorem.....	39
2.2. The UNE spaces with a given base	44
Chapter III. The UNE involutory space	
3.1. Repeat of some definitions in the theory of involutions.....	58
3.2. Homography associated with two sets of n elements of an unicursal variety and the involutory space	59
3.3. Properties of the local absolutes, of the base and of the NE cones in an involutory space.....	75
3.4. The 4-dimensional involutory space.....	81
Chapter IV. The r-isotropic cones of an UNE space	
4.1. Fifth fundamental theorem	87
4.2. The r -isotropic cone	88
4.3. The remarkable points and the remarkable cones associated with them	92

4.4. The NE subspaces imbedded in an UNE space	104
4.5. Preparation for the construction of a class of UNE spaces having the NE subspaces	120
4.6. A class of UNE spaces having the NE subspaces	138
Chapter V. The spherical UNE spaces	
5.1. Two types of spherical UNE spaces	147
5.2. Spherical subspaces imbedded in a given UNE space	157
5.3. Totally r -isotropic cones	167
5.4. Examples of the UNE spaces having the spherical subspaces or the r -isotropic points	177
Chapter VI The UNE spaces having the local absolute permutable with the NE cone	
6.1 First example of a such UNE space	184
6.2 First step of generalization	207
Chapter VII Application to the theory of involutions	
7.1. Recall of certain knowledges over the n -ary involution	223
7.2 Introduction of the UNE metric	225
7.3 The projectively regular sets of n elements	229
7.4 Applications of the results obtained in 7.2 and 7.3	243
7.5. Some definitions about the binary quadratic involution $I_2^1(2)$	246
7.6. Properties of the involutions $I_2^1(2)$	250
7.7. Cyclic involutions $I_2^1(2)$	260
Literature	264
Contents	267
Contents-index	269
