Social Statistics

Revised Second Edition

Hubert M. Blalock, Jr.

Professor of Sociology
University of Washington

E.M.T. MATHEMATICS DEPT.

McGraw-Hill Book Company

New York	St. Louis	San Francisco	Auckland	Bogotá	
Düsseldorf	Johannesburg	London	Madrid	Mexico	Montreal

Tokyo	Toronto				

Contents

Preface	ix
Part 1 Introduction	
1. Introduction: Purposes and Limitations of Statistics	3
1.1 Functions of Statistics	4
1.2 The Place of Statistics in the Research Process	7
1.3 A Word of Advice	8
2. Theory, Measurement, and Mathematics	11
2.1 Theory and Hypotheses: Operational Definitions	11
2.2 Level of Measurement: Nominal, Ordinal, and Interval Scales	15
2.3 Measurement and Statistics	20
2.4 Organization of the Book	24
Part 2 Univariate Descriptive Statistics	
3. Nominal Scales: Proportions, Percentages, and Ratios	31
3.1 Proportions	31
3.2 Percentages	33
3.3 Ratios	36
4. Interval Scales: Frequency Distributions and Graphic Presentation	41
4.1 Frequency Distributions: Grouping the Data	41
4.2 Cumulative Frequency Distributions	47
4.3 Graphic Presentation: Histograms, Frequency Polygons, and Ogives	48
5. Interval Scales: Measures of Central Tendency	55
5.1 The Arithmetic Mean	56
5.2 The Median	59
5.3 Computation of Mean and Median from Grouped Data	61
5.4 Comparison of Mean and Median	66

5.5 Other Measures of Central Tendency	69
5.6 Deciles, Quartiles, and Percentiles	71
6. Interval Scales: Measures of Dispersion	75
6.1 The Range	75
6.2 The Quartile Deviation	77
6.3 The Mean Deviation	77
6.4 The Standard Deviation	78
6.5 The Coefficient of Variation	84
6.6 Other Summarizing Measures	85
7. The Normal Distribution	89
7.1 Finite versus Infinite Frequency Distributions	89
7.2 General Form of the Normal Curve	92
7.3 Areas under the Normal Curve	95
7.4 Further Illustrations of the Use of the Normal Table	98
Part 3 Inductive Statistics	
8. Introduction to Inductive Statistics	105
8.1 Statistics and Parameters	105
8.2 Steps in Testing an Hypothesis	106
8.3 The Fallacy of Affirming the Consequent	108
8.4 The Form of Statistical Hypotheses	110
9. Probability	115
9.1 A Priori Probabilities	116
9.2 Mathematical Properties of Probabilities	120
9.3 Permutations	131
9.4 Expected Values and Moments	137
9.5 Independence and Random Sampling	139
10. Testing Hypotheses: The Binomial Distribution	149
10.1 The Binomial Probability Distribution	149
10.2 Steps in Statistical Tests	154
10.3 Applications of the Binomial	166
10.4 Extensions of the Binomial	170
10.5 Summary	173
11. Single-sample Tests Involving Means and Proportions	179
11.1 Sampling Distribution of Means	179
11.2 Test for Population Mean, σ Known	186
11.3 Student's t Distribution	190
11.4 Tests Involving Proportions	195
12. Point and Interval Estimation	203
12.1 Point Estimation	204
12.2 Interval Estimation	208

12.3	Confidence Intervals for Other Types of Problems	213
12.4	Determining the Sample Size	215
Part 4 Bivariate and Multivariate Statistics		
13. Two-sample Tests: Difference of Means and Proportions		223
13.1	Difference-of-means Test	224
13.2	Difference of Proportions	232
13.3	Confidence Intervals	236
13.4	Dependent Samples: Matched Pairs	236
13.5	Comments on Experimental Designs and Significance Tests	239
14. Ordinal Scales: Two-sample Nonparametric Tests		247
14.1	Power and Power Efficiency	248
14.2	The Wald-Wolfowitz Runs Test	253
14.3	The Mann-Whitney or Wilcoxon Test	259
14.4	The Kolmogorov-Smirnov Test	266
14.5	The Wilcoxon Matched-pairs Signed-ranks Test	269
14.6	Concluding Remarks	273
15. Nominal Scales: Contingency Problems		279
15.1	The Chi-square Test	279
15.2	Fisher's Exact Test	292
15.3	Partitioning Chi Square and Other Tests	297
15.4	Measures of Strength of Relationship	299
15.5	Controlling for Other Variables	315
15.6	Cautions regarding Categorized Variables	325
16. Analysis of Variance		335
16.1	Simple Analysis of Variance	336
16.2	Comparisons of Specific Means	347
16.3	Two-way Analysis of Variance	352
16.4	Nonparametric Alternatives to Analysis of Variance	367
16.5	Measures of Association: Intraclass Correlation	372
17. Correlation and Regression		381
17.1	Linear Regression and Least Squares	382
17.2	Correlation	396
18. Correlation and Regression (Continued)		415
18.1	Significance Tests and Confidence Intervals	415
18.2	Nonlinear Correlation and Regression	426
18.3	The Effects of Measurement Errors	431
18.4	Ordinal Scales: Rank-order Correlation	433
18.5	Decisions about Levels of Measurement and Groupings	444

19. Multiple and Partial Correlation	451
19.1 Multiple Regression and Least Squares	451
19.2 Partial Correlation	455
19.3 Partial Rank-order Correlation	462
19.4 Partial Correlation and Causal Interpretations	468
19.5 Multiple Least Squares and the Beta Coefficients	477
19.6 Multiple Correlation	482
19.7 Multiple Regression and Nonlinearity	489
19.8 Significance Tests and Confidence Intervals	493
19.9 A Matrix Algebra Representation of the General Linear Model	497
20. Analysis of Covariance, Dummy Variables, and Other Applications of the Linear Model	509
20.1 Relating Two Interval Scales, Controlling for Nominal Scale	510
20.2 Relating Interval and Nominal Scales, Controlling for Interval Scale	527
20.3 Extensions of Covariance Analysis	533
20.4 Dummy Variable Analysis	534
20.5 Multiple-Classification Analysis and Automatic Interaction Detector Analysis	538
20.6 Categorized Dependent Variables: Log-Linear Models	541
20.7 Concluding Remarks	545
Part 5 Sampling	
21. Sampling	553
21.1 Simple Random Sampling	554
21.2 Systematic Sampling	558
21.3 Stratified Sampling	560
21.4 Cluster Sampling	567
21.5 Nonprobability Sampling	571
21.6 Nonsampling Errors and Sample Size	573
Appendix 1. Review of Algebraic Operations	577
2. Tables	585
Indexes	619
Name Index	
Subject Index
