
Assembly Rules and Restoration Ecology

Bridging the Gap between Theory and Practice

Edited by

Vicky M. Temperton, Richard J. Hobbs,
Tim Nuttle, and Stefan Halle

SOCIETY FOR ECOLOGICAL RESTORATION INTERNATIONAL

ISLAND PRESS

Washington • Covelo • London

CONTENTS

PREFACE

xiii

1. Introduction: Why Assembly Rules Are Important to the Field of Restoration Ecology <i>Vicky M. Temperton, Richard J. Hobbs, Tim Nuttle, Marzio Fattorini, and Stefan Halle</i>	1
PART I. Assembly Rules and the Search for a Conceptual Framework for Restoration Ecology	9
2. Advances in Restoration Ecology: Insights from Aquatic and Terrestrial Ecosystems <i>Stefan Halle and Marzio Fattorini</i>	10
3. The Search for Ecological Assembly Rules and Its Relevance to Restoration Ecology <i>Vicky M. Temperton and Richard J. Hobbs</i>	34
4. Assembly Models and the Practice of Restoration <i>Julie L. Lockwood and Corey L. Samuels</i>	55
PART II. Ecological Filters as a Form of Assembly Rule	71
5. Ecological Filters, Thresholds, and Gradients in Resistance to Ecosystem Reassembly <i>Richard J. Hobbs and David A. Norton</i>	72
6. The Dynamic Environmental Filter Model: How Do Filtering Effects Change in Assembling Communities after Disturbance? <i>Marzio Fattorini and Stefan Halle</i>	96

7. Beyond Ecological Filters: Feedback Networks in the Assembly and Restoration of Community Structure <i>Lisa R. Belyea</i>	115
PART III. Assembly Rules and Community Structure 133	
8. Self-Organization of Plankton Communities: A Test of Freshwater Restoration <i>Carmen Rojo</i>	134
9. Functional Group Interaction Patterns Across Trophic Levels in a Regenerating and a Seminatural Grassland <i>Winfried Voigt and Jörg Perner</i>	156
10. Structure, Dynamics, and Restoration of Plant Communities: Do Arbuscular Mycorrhizae Matter? <i>Carsten Renker, Martin Zobel, Maarja Öpik, Michael F. Allen, Edith B. Allen, Miroslav Vosátka, Jana Rydlová, and François Buscot</i>	189
11. Modeling of Plant Community Assembly in Relation to Deterministic and Stochastic Processes <i>Gerrit W. Heil</i>	230
12. Application of Stable Nitrogen Isotopes to Investigate Food-Web Development in Regenerating Ecosystems <i>Jan Rothe and Gerd Gleixner</i>	245
PART IV. Assembly Rules in Severely Disturbed Environments 265	
13. The Roles of Seed Dispersal Ability and Seedling Salt Tolerance in Community Assembly of a Severely Degraded Site <i>Markus Wagner</i>	266
14. Order of Arrival and Availability of Safe Sites: An Example of Their Importance for Plant Community Assembly in Stressed Ecosystems <i>Vicky M. Temperton and Kerstin Zirr</i>	285
15. Are Assembly Rules Apparent in the Regeneration of a Former Uranium Mining Site? <i>Hartmut Sänger and Gottfried Jetschke</i>	305
16. The Role of Nutrients and the Importance of Function in the Assembly of Ecosystems <i>Anthony D. Bradshaw</i>	325

PART V. Disturbance and Assembly	
17. Disturbance, Succession, and Community Assembly in Terrestrial Plant Communities <i>Peter S. White and Anke Jentsch</i>	341
18. Disturbance, Assembly Rules, and Benthic Communities in Running Waters: A Review and Some Implications for Restoration Projects <i>Christoph D. Matthaei, Colin R. Townsend, Chris J. Arbuckle, Kathi A. Peacock, Cornelia Guggelberger, Claudia E. Küster, and Harald Huber</i>	342
19. How Structure Controls Assembly in the Hyporheic Zone of Rivers and Streams: Colmation as a Disturbance <i>Eva-Barbara Meidl and Wilfried Schönborn</i>	367
Synthesis	389
20. Assembly Rules and Ecosystem Restoration: Where to from Here? <i>Tim Nuttle, Richard J. Hobbs, Vicky M. Temperton, and Stefan Halle</i>	409
