Contents

Preface to the 1st Edition *XIII*

Preface to the 2nd Edition *XV*

Symbols *XVII*

1 **Introduction** *1*

2 **Dimensional Analysis** *3*
2.1 The Fundamental Principle *3*
2.2 What is a Dimension? *3*
2.3 What is a Physical Quantity? *3*
2.4 Base and Derived Quantities, Dimensional Constants *4*
2.5 Dimensional Systems *5*
2.6 Dimensional Homogeneity of a Physical Content *7*
Example 1: What determines the period of oscillation of a pendulum? *7*
Example 2: What determines the duration of fall θ of a body in a homogeneous gravitational field (Law of Free Fall)? What determines the speed v of a liquid discharge out of a vessel with an opening? (*Torricelli's* formula) *9*
Example 3: Correlation between meat size and roasting time *12*
2.7 The Pi Theorem *14*

3 **Generation of Pi-sets by Matrix Transformation** *17*
Example 4: The pressure drop of a homogeneous fluid in a straight, smooth pipe (ignoring the inlet effects) *17*

4 **Scale Invariance of the Pi-space – the Foundation of the Scale-up** *25*
Example 5: Heat transfer from a heated wire to an air stream *27*

Scale-Up in Chemical Engineering. 2nd Edition. M. Zlokarnik

ISBN: 3-527-31421-0

5 Important Tips Concerning the Compilation of the Problem Relevance List *31*
5.1 Treatment of Universal Physical Constants *31*
5.2 Introduction of Intermediate Quantities *31*
Example 6: Homogenization of liquid mixtures with different densities and viscosities *33*
Example 7: Dissolved air flotation process *34*

6 Important Aspects Concerning the Scale-up *39*
6.1 Scale-up Procedure for Unavailability of Model Material Systems *39*
Example 8: Scale-up of mechanical foam breakers *39*
6.2 Scale-up Under Conditions of Partial Similarity *42*
Example 9: Drag resistance of a ship's hull *43*
Example 10: Rules of thumb for scaling up chemical reactors: Volume-related mixing power and the superficial velocity as design criteria for mixing vessels and bubble columns *47*

7 Preliminary Summary of the Scale-up Essentials *51*
7.1 The Advantages of Using Dimensional Analysis *51*
7.2 Scope of Applicability of Dimensional Analysis *52*
7.3 Experimental Techniques for Scale-up *53*
7.4 Carrying out Experiments Under Changes of Scale *54*

8 Treatment of Physical Properties by Dimensional Analysis *57*
8.1 Why is this Consideration Important? *57*
8.2 Dimensionless Representation of a Material Function *59*
Example 11: Standard representation of the temperature dependence of the viscosity *59*
Example 12: Standard representation of the temperature dependence of density *63*
Example 13: Standard representation of the particle strength for different materials in dependence on the particle diameter *64*
Example 14: Drying a wet polymeric mass. Reference-invariant representation of the material function $D(T, F)$ *66*
8.3 Reference-invariant Representation of a Material Function *68*
8.4 Pi-space for Variable Physical Properties *69*
Example 15: Consideration of the dependence $\mu(T)$ using the μ_w/μ term *70*
Example 16: Consideration of the dependence $\rho(T)$ by the Grashof number Gr *72*
8.5 Rheological Standardization Functions and Process Equations in Non-Newtonian Fluids *72*
8.5.1 Rheological Standardization Functions *73*
8.5.1.1 Flow Behavior of Non-Newtonian Pseudoplastic Fluids *73*
8.5.1.2 Flow Behavior of Non-Newtonian Viscoelastic Fluids *76*
8.5.1.3 Dimensional-analytical Discussion of Viscoelastic fluids *78*
8.5.1.4 Elaboration of Rheological Standardization Functions *80*

Example 17: Dimensional-analytical treatment of *Weissenberg*'s phenomenon – Instructions for a PhD thesis *81*
8.5.2 Process Equations for Non-Newtonian Fluids *85*
8.5.2.1 Concept of the Effective Viscosity μ_{eff} According to *Metzner–Otto* *86*
8.5.2.2 Process Equations for Mechanical Processes with Non-Newtonian Fluids *87*
Example 18: Power characteristics of a stirrer *87*
Example 19: Homogenization characteristics of a stirrer *90*
8.5.2.3 Process Equations for Thermal Processes in Association with Non-Newtonian Fluids *91*
8.4.2.4 Scale-up in Processes with Non-Newtonian Fluids *91*

9 Reduction of the Pi-space *93*
9.1 The Rayleigh – Riabouchinsky Controversy *93*
Example 20: Dimensional-analytical treatment of *Boussinesq*'s problem *95*
Example 21: Heat transfer characteristic of a stirring vessel *97*

10 Typical Problems and Mistakes in the Use of Dimensional Analysis *101*
10.1 Model Scale and Flow Conditions – Scale-up and Miniplants *101*
10.1.1 The Size of the Laboratory Device and Fluid Dynamics *102*
10.1.2 The Size of the Laboratory Device and the Pi-space *103*
10.1.3 Micro and Macro Mixing *104*
10.1.4 Micro Mixing and the Selectivity of Complex Chemical Reactions *105*
10.1.5 Mini and Micro Plants from the Viewpoint of Scale-up *105*
10.2 Unsatisfactory Sensitivity of the Target Quantity *106*
10.2.1 Mixing Time θ *106*
10.2.2 Complete Suspension of Solids According to the 1-s Criterion *106*
10.3 Model Scale and the Accuracy of Measurement *107*
10.3.1 Determination of the Stirrer Power *108*
10.3.2 Mass Transfer in Surface Aeration *108*
10.4 Complete Recording of the Pi-set by Experiment *109*
10.5 Correct Procedure in the Application of Dimensional Analysis *111*
10.5.1 Preparation of Model Experiments *111*
10.5.2 Execution of Model Experiments *111*
10.5.3 Evaluation of Test Experiments *111*

11 Optimization of Process Conditions by Combining Process Characteristics *113*
Example 22: Determination of stirring conditions in order to carry out a homogenization process with minimum mixing work *113*
Example 23: Process characteristics of a self-aspirating hollow stirrer and the determination of its optimum process conditions *118*
Example 24: Optimization of stirrers for the maximum removal of reaction heat *121*

12 **Selected Examples of the Dimensional-analytical Treatment of Processes in the Field of Mechanical Unit Operations** *125*
Introductory Remark *125*
Example 25: Power consumption in a gassed liquid. Design data for stirrers and model experiments for scaling up *125*
Example 26: Scale-up of mixers for mixing of solids *131*
Example 27: Conveying characteristics of single-screw machines *135*
Example 28: Dimensional-analytical treatment of liquid atomization *140*
Example 29: The hanging film phenomenon *143*
Example 30: The production of liquid/liquid emulsions *146*
Example 31: Fine grinding of solids in stirred media mills *150*
Example 32: Scale-up of flotation cells for waste water purification *156*
Example 33: Description of the temporal course of spin drying in centrifugal filters *163*
Example 34: Description of particle separation by means of inertial forces *166*
Example 35: Gas hold-up in bubble columns *170*
Example 36: Dimensional analysis of the tableting process *174*

13 **Selected Examples of the Dimensional-analytical Treatment of Processes in the Field of Thermal Unit Operations** *181*
13.1 Introductory Remarks *181*
Example 37: Steady-state heat transfer in mixing vessels *182*
Example 38: Steady-state heat transfer in pipes *184*
Example 39 Steady-state heat transfer in bubble columns *185*
13.2 Foundations of the Mass Transfer in a Gas/Liquid (G/L) System *189*
A short introduction to Examples 40, 41 and 42 *189*
Example 40: Mass transfer in surface aeration *191*
Example 41: Mass transfer in volume aeration in mixing vessels *193*
Example 42: Mass transfer in the G/L system in bubble columns with injectors as gas distributors. Otimization of the process conditions with respect to the efficiency of the oxygen uptake $E \equiv G/\Sigma P$ *196*
13.3 Coalescence in the Gas/Liquid System *203*
Example 43: Scaling up of dryers *205*

14 **Selected Examples for the Dimensional-analytical Treatment of Processes in the Field of Chemical Unit Operations** *211*
Introductory Remark *211*
Example 44: Continuous chemical reaction process in a tubular reactor *212*
Example 45: Description of the mass and heat transfer in solid-catalyzed gas reactions by dimensional analysis *218*
Example 46: Scale-up of reactors for catalytic processes in the petrochemical industry *226*
Example 47: Dimensioning of a tubular reactor, equipped with a mixing nozzle, designed for carrying out competitive-consecutive reactions *229*
