PREFACE	XIII
ACKNOWLEDGMENTS	XVII
PROLOGUE	1

CHAPTER 1	Basic Digital Communications Concepts	6
1-1	Introduction	6
1-2	Detection of Binary Signals in Additive White Gaussian Noise	6
1-2.1	Coherent Modulation Schemes	6
1-2.2	Noncoherent Modulation Schemes	12
1-3	Signal Detection in Geometric Terms	15
1-3.1	Gram-Schmidt Procedure	15
1-3.2	Geometric View of Signal Detection	16
1-3.3	M -ary Phase-Shift Keying	18
1-3.4	Coherent M -ary Frequency-Shift Keying	20
1-3.5	M -ary Quadrature-Amplitude-Shift Keying	21
1-3.6	Differentially Coherent Phase-Shift Keying	22
1-3.7	Noncoherent M -ary FSK	23
1-3.8	Hybrid Modulation Schemes	23
1-4	Comparison of Modulation Schemes	31
1-4.1	Bandwidth Efficiency	31
1-4.2	Power Efficiency	32
1-5	Signaling Through Fading Channels	33
1-6	Summary	41
	References	41
	Problems	43

CHAPTER 2	Introduction to Spread-Spectrum Systems	47
2-1	Introduction	47
2-2	Two Communications Problems	48
2-2.1	Pulse-Noise Jamming	48
2-2.2	Low Probability of Detection	50
2-3	Direct-Sequence Spread Spectrum	52
2-3.1	BPSK Direct-Sequence Spread Spectrum	52
2-3.2	QPSK Direct-Sequence Spread Spectrum	60
2-3.3	MSK Direct-Sequence Spread Spectrum	64

2-4	Frequency-Hop Spread Spectrum	68
2-4.1	Coherent Slow-Frequency-Hop Spread Spectrum	68
2-4.2	Noncoherent Slow-Frequency-Hop Spread Spectrum	73
2-4.3	Noncoherent Fast-Frequency-Hop Spread Spectrum	75
2-5	Hybrid Direct-Sequence/Frequency-Hop Spread Spectrum	75
2-6	Complex-Envelope Representation of Spread-Spectrum Systems	78
2-7	Summary	83
	References	83
	Problems	84

CHAPTER 3 Binary Shift-Register Sequences for Spread-Spectrum Systems 89

3-1	Introduction	89
3-2	Definitions, Mathematical Background, and Sequence Generator Fundamentals	90
3-2.1	Definitions	90
3-2.2	Finite-Field Arithmetic	91
3-2.3	Sequence Generator Fundamentals	99
3-2.4	State-Machine Representation of Shift-Register Generators	109
3-3	Maximal-Length Sequences	113
3-3.1	Properties of m -Sequences	113
3-3.2	Power Spectrum of m -Sequences	115
3-3.3	Tables of Polynomials Yielding m -Sequences	117
3-3.4	Partial Autocorrelation Properties of m -Sequences	121
3-3.5	Power Spectrum of $c(t)c(t + \epsilon)$	125
3-3.6	Generation of Specific Delays of an m -Sequence	128
3-4	Gold Codes	135
3-5	Nonlinear Code Generators	138
3-6	Summary	142
	References	143
	Problems	144

CHAPTER 4 Code Tracking Loops 149

4-1	Introduction	149
4-2	Optimum Tracking of Wideband Signals	150
4-3	Baseband Delay-Lock Tracking Loop	153
4-4	Noncoherent Delay-Lock Tracking Loop	164
4-5	Tau-Dither Noncoherent Tracking Loop	179
4-6	Double-Dither Noncoherent Tracking Loop	189
4-7	Noncoherent Delay-Lock Tracking Loop with Arbitrary Data and Spreading Modulation	192

4-8	Code Tracking Loops for Frequency-Hop Systems	201
4-9	Summary	213
	References	215
	Problems	216

CHAPTER 5 Initial Synchronization of the Receiver Spreading Code 221

5-1	Introduction	221
5-2	Problem Definition and the Optimum Synchronizer	223
5-3	Serial Search Synchronization Techniques	225
	5-3.1 Calculation of the Mean and Variance of Synchronization Time	225
	5-3.2 Modified Sweep Strategies	230
	5-3.3 Continuous Linear Sweep of the Uncertainty Region	233
	5-3.4 Detection of a Signal in Additive White Gaussian Noise	240
5-4	Generalized Analysis of Average Synchronization Time	283
5-5	Synchronization Using a Matched Filter	291
5-6	Synchronization by Estimating the Received Spreading Code	301
5-7	Tracking Loop Pull-in	303
5-8	Summary	308
	References	311
	Problems	315

CHAPTER 6 Performance of Spread-Spectrum Systems in Jamming Environments 319

6-1	Introduction	319
6-2	Spread-Spectrum Communication System Model	320
6-3	Performance of Spread-Spectrum Systems Without Coding	326
	6-3.1 Performance in AWGN or Barrage Noise Jamming	327
	6-3.2 Performance in Partial-Band Jamming	337
	6-3.3 Performance in Pulsed Noise Jamming	350
	6-3.4 Performance in Single-Tone Jamming	354
	6-3.5 Performance in Multiple-Tone Jamming	368
	6-3.6 Conclusions	373
6-4	Summary	374
	References	375
	Problems	378

CHAPTER 7 Performance of Spread-Spectrum Systems with Forward Error Correction

381

- 7-1 Introduction 381
- 7-2 Elementary Block Coding Concepts 382
 - 7-2.1 Block Code Definitions 382
 - 7-2.2 Optimum Decoding Rule 385
 - 7-2.3 Calculation of Error Probability 391
- 7-3 Elementary Convolutional Coding Concepts 403
 - 7-3.1 Basic Concepts 403
 - 7-3.2 Definition of a Convolutional Code 404
 - 7-3.3 Decoding Convolutional Codes 408
 - 7-3.4 Viterbi Algorithm 413
 - 7-3.5 Decoding and Bit-Error Probability 427
 - 7-3.6 Other Topics 429
- 7-4 Results for Specific Error Correction Codes 431
 - 7-4.1 BCH Codes 431
 - 7-4.2 Reed-Solomon Codes 433
 - 7-4.3 Maximum Free-Distance Convolutional Codes 434
 - 7-4.4 Repeat Coding for the Hard-Decision FH/MFSK Channel 435
- 7-5 Interleaving 447
- 7-6 Coding Bounds 449
 - 7-6.1 Error Probability Bounds Using the Channel Parameter D 449
 - 7-6.2 Computational Cutoff Rate R_0 453
- 7-7 Summary 454
- References 455
- Problems 458

CHAPTER 8 Introduction to Fading Channels

460

- 8-1 Introduction 460
- 8-2 Statistical Model of Fading 460
 - 8-2.1 General Fading Channel Model 462
 - 8-2.2 WSSUS Fading Channels 467
 - 8-2.3 Doubly Spread Channels 468
 - 8-2.4 Time-Selective Fading Channels 471
 - 8-2.5 Frequency-Selective Fading Channels 475
 - 8-2.6 Nondispersive Fading Channels 480
- 8-3 Characterization of the Mobile Radio Channel 482
 - 8-3.1 Time-Selective Fading 483
 - 8-3.2 Frequency-Selective Fading 486
 - 8-3.3 Mobile Radio Path Loss 488
 - 8-3.4 Shadowing 490
 - 8-3.5 Coverage Reliability 491

8-4	Requirement for Diversity in Fading Channels	493
8-4.1	Diversity Approaches	497
8-4.2	Diversity Combining Methods	500
8-4.3	Performance of Maximal Ratio Combining	502
8-4.4	Other Diversity Combining Methods	506
8-4.5	The Rake Receiver	507
8-4.6	Summary: The Benefits of Diversity	512
8-5	Summary	513
	References	513
	Problems	517

CHAPTER 9 **Code-Division Multiple-Access Digital Cellular Systems** 520

9-1	Introduction	520
9-2	Cellular Radio Concept	520
9-2.1	Fundamentals of Cellular Radio Systems	521
9-2.2	Co-channel Interference Protection Prediction	526
9-2.3	Cellular Concept Revisited	528
9-3	CDMA Digital Cellular Systems	530
9-3.1	General Aspects of CDMA Digital Cellular Systems	530
9-3.2	Special Aspects of CDMA Digital Cellular Systems	535
9-4	Specific Examples of CDMA Digital Cellular Systems	535
9-4.1	North American DS-SS Digital Cellular System (IS-95)	536
9-4.2	Cooper and Nettleton DSSS-FHMA System	550
9-4.3	Bell Labs Multilevel FSK Frequency-Hop System	553
9-4.4	SFH900 System	559
9-4.5	GSM-SFH Digital Cellular System	561
9-4.6	Hybrid SFH TDMA/SS System for PCS Applications	566
9-5	Summary	572
	References	574
	Problems	581

CHAPTER 10 **Low-Probability-of-Intercept Methods** 584

10-1	Introduction	584
10-2	Nature of Covert Communications	584
10-3	Energy Detection in AWGN	586
10-4	Optimum Intercept Receivers for Spread-Spectrum Signals	591
10-4.1	Introduction	591
10-4.2	Optimum Intercept Receiver for Direct-Sequence Spread Spectrum	591
10-4.3	Intercept Receivers for Frequency-Hop Spread Spectrum	599

10-5	The OR/BMWD: Approximately Optimum Spread-Spectrum Signal Detector	602
10-6	Estimation of Spread-Spectrum Signal Parameters	605
10-7	Summary	610
	References	611
	Problems	613

APPENDIX A Summary of Phase-Locked Theory 615

A-1	Introduction	615
A-2	Phase-Locked-Loop Models and Characteristics of Operation	615
A-2.1	Synchronized Mode: Linear Operation	615
A-2.2	Effects of Noise	619
A-2.3	Phase-Locked-Loop Tracking of Oscillators with Phase Noise	625
A-2.4	Phase Jitter Plus Noise Effects	626
A-2.5	Transient Response	628
A-2.6	Phase-Locked-Loop Acquisition	631
A-2.7	Effects of Transport Delay	635
A-3	Frequency Synthesis	636
A-3.1	Introduction	636
A-3.2	Digital Synthesizers	636
A-3.3	Direct Synthesis	638
A-3.4	Phase-Locked Frequency Synthesizers	641
	References	643

APPENDIX B Gaussian Probability Function Reference 644 645

APPENDIX C Power Spectral Densities for Sequences of Random Binary Digits and Random Tones Reference 646 650

APPENDIX D Calculation of the Power Spectrum of the Product of Two *M*-Sequences Reference 651 659

APPENDIX E Evaluation of Phase Discriminator Output Autocorrelation Functions and Power Spectra 660

- E-1** Noncoherent Delay-Lock Tracking Loop 660
E-2 Tau-Dither Noncoherent Tracking Loop 665
 References 671

APPENDIX F Numerical Approximations for the Chi-Squared Probability Distribution and Marcum's Q -Function 672

- F-1** Introduction 672
F-2 Computation of the (Central) Chi-Squared Distribution 672
F-3 Generalized Marcum's Q -Function 676
F-4 Noncentral Chi-Squared Distribution 678
 References 681

APPENDIX G Mathematical Tables 682

INDEX 689
