Abstract: The paper is concerned with the existence of almost periodic mild solutions to evolution equations of the form $u'(t) = Au(t) + f(t)$, where A generates a C -semigroup and f is almost periodic. Using the evolution C -semigroup associated with the equation under consideration, we obtain various sufficient conditions for the existence of almost periodic solutions to (*) which extend previous ones to a more general class of ill-posed equations involving C -semigroups. © 2004 Elsevier Inc.
