Contents

Preface	vii
Part I. Methodology	
Chapter 1. Introduction	3
Chapter 2. Planning an Operations Research Study	12
Part II. Fundamentals	
Chapter 3. Probability Theory	23
Chapter 4. Statistical Inference and Decision Theory	77
Part III. Techniques: Mathematical Programming	
Chapter 5. Linear Programming	127
Chapter 6. Special Types of Linear Programming Problems	172
Chapter 7. Network Analysis, Including PERT	203
Chapter 8. Dynamic Programming	239
Chapter 9. Game Theory	263
Part IV. Techniques: Probabilistic Models	
Chapter 10. Queuing Theory	283
Chapter 11. The Application of Queuing Theory	322
Chapter 12. Inventory Theory	357
Chapter 13. Markov Chains and Their Applications	402
Chapter 14. Simulation	439
Part V. Techniques: Advanced Topics in Mathematical Programming	
Chapter 15. Advanced Topics in Linear Programming	479

Chapter 16. Integer Programming	553
Chapter 17. Nonlinear Programming	574

Appendices

Convexity	597
Classical Optimization Methods	603
Matrices and Matrix Manipulations	609
Simultaneous Linear Equations	618
Tables	622
Index	633
