## TABLE OF CONTENTS

## Chapter I. XUV Generation and Lasers

## Broadly Tunable VUV Radiation Generated by Frequency Mixing in Gases

R. Hilbig, G. Hilber, A. Timmermann, and R. Wallenstein.....1

XUV Generation in Pulsed Free Jets: Theory of Operation and Application to H<sub>2</sub> DetectionA.H. Kung, N.A. Gershenfeld, C.T. Rettner, D.S. Bethune,  
E.E. Marinero, and R.N. Zare.....10

## Feasibility of Collisional XUV-Laser and XUV Radiation from Autoionizing Potassium Levels in Discharge

V.O. Papanyan, A.E. Martirosyan, G.C. Nersisyan, and  
Y.K. Gabrielyan.....23

## Soft X-ray Laser Experiments at the Novette Laser Facility

D. Matthews, P. Hagelstein, M. Rosen, R. Kauffman, R. Lee,  
C. Wang, H. Medeck, M. Campbell, N. Ceglio, G. Leipelt,  
P. Lee, P. Drake, L. Pleasance, L. Seppala, W. Hatcher,  
G. Rambach, A. Hawryluk, G. Heaton, R. Price, R. Ozarski,  
R. Speck, K. Manes, J. Underwood, A. Toor, T. Weaver,  
L. Coleman, B. DeMartini, J. Auerbach, R. Turner, W. Zagotta,  
C. Hailey, M. Eckart, A. Hazi, B. Whitten, G. Charatis,  
P. Rockett, G. Busch, D. Sullivan, C. Shepard, R. Johnson,  
B. MacGowan, and P. Burkhalter.....25

## Tunable Sub-Angstrom Radiation Generated by Anti-Stokes Scattering from Nuclear Levels

C.B. Collins and B.D. DePaola.....45

## Zoneplates and Their Applications in Soft X-ray Imaging

J. Kirz.....54

## Recent Experiments on Soft X-ray Laser Development in a Confined Plasma Column

S. Suckewer, C. Keane, H. Milchberg, C.H. Skinner, and  
D. Voorhees.....55

## Chapter II. Auto-ionizing and Multiphoton Processes

## Collision-Free Multiple Ionization of Atoms and XUV Stimulated Emission in Krypton at 193 nm

H. Egger, T.S. Luk, W. Müller, H. Pummer, and  
C.K. Rhodes.....64

## Multiply Charged Ions Produced by Multiphoton Absorption in Rare Gas Atoms

A.L'Huillier, L-A. Lompré, G. Mainfray and C. Manus.....79

|                                                                                                                                                              |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Laser Enhanced Auto-Ionization and Dressed Resonances<br>J.H. Eberly and D. Agassi.....                                                                      | 89  |
| Correlations in Highly Excited Two-Electron Atoms: 'Planetary'<br>Behavior<br>W.E. Cooke, R.M. Jopson, L.A. Bloomfield, R.R. Freeman,<br>J. Bokor.....       | 91  |
| Multiphoton Ionization of Atomic Cesium<br>R.N. Compton, C.E. Klots, J.A.D. Stockdale and C.D. Cooper...                                                     | 101 |
| Photoionization of Excited Molecular States Using Multiphoton<br>Excitation Techniques<br>P.M. Dehmer, S.T. Pratt, and J.L. Dehmer.....                      | 114 |
| State-to-State Photochemistry of Glyoxal Using a Tunable VUV<br>Laser for Product Detection<br>J. W. Hepburn, N. Sivakumar and P.L. Houston.....             | 126 |
| Multiphoton Ionization of Benzene in Solution<br>K. Siomos, H. Faidas, and L.G. Christophorou.....                                                           | 135 |
| Chapter III. Multiphoton Ionization                                                                                                                          |     |
| Multiphoton Ionization of Cesium Atoms Above and Below the<br>Two-Photon Ionization Threshold<br>A. Dodhy, J.A.D. Stockdale, and R.N. Compton.....           | 143 |
| Two and Three Photon Ionization of Cesium<br>M.S. Pindzola.....                                                                                              | 150 |
| Multiphoton Ionization Spectroscopy of the Fluoromethyl Radical<br>C.S. Dulcey, D.J. Bogan, and J.W. Hudgens.....                                            | 156 |
| Grotrian Diagram of the Quartet System of Na I<br>D.E. Holmgren, D.J. Walker, D.A. King, and S.E. Harris.....                                                | 157 |
| Measured Radiative Lifetimes of Rovibronic Levels in the<br>$A^1\Pi$ ( $v = 0$ ) State of CO and Comparison with Theory<br>M. Maeda, and B.P. Stoicheff..... | 162 |
| Chapter IV. Instrumentation                                                                                                                                  |     |
| Variable Line Space Slitless Spectrometers at Grazing Incidence<br>M.C. Hettrick.....                                                                        | 169 |
| VUV Instrument Calibrations for Laser-Plasma Studies<br>P.D. Rockett, C.R. Bird, and R. Shepherd.....                                                        | 171 |
| A High-Resolution VUV Spectrometer with Electronic Parallel<br>Spectral Detector<br>C.L. Cromer, J.M. Bridges, T.B. Lucatorto, and J.R. Roberts..            | 180 |

|                                                                                                                                                                                 |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Photoemissive Materials for 0.35 $\mu$ m Laser Fiducials in X-ray<br>Streak Cameras<br>C.P. Hale, H. Medeck, P.H.Y. Lee.....                                                    | 193 |
| X-UV Gain Amplification Studies in Laser Plasma Using Normal<br>Incidence Multilayers Mirrors<br>P. Dhez, G. Jamelot, A. Carillon, P. Jaegle, P. Pardo, and<br>D. Naccache..... | 199 |
| Performance of Transition Metal--Carbon Multilayer Mirrors from<br>50 to 350 eV<br>D.R. Kania, R.J. Bartlett, W.J. Trela, E. Spiller, and<br>L. Golub.....                      | 207 |
| Chapter V. XUV Spectroscopy                                                                                                                                                     |     |
| Molecular Dynamics Probed by VUV Radiation<br>J.C. Polanyi.....                                                                                                                 | 212 |
| Photoionization of the H Atom in Strong Electric Fields by<br>Resonant Two-Photon Excitation<br>K.H. Welge, and H. Rottke.....                                                  | 213 |
| Use of Synchrotron and Laser Radiations for Present and Future<br>Photoionization Studies in Excited Atoms and Ions<br>F.J. Willeumier.....                                     | 220 |
| State-Selective Vacuum UV Spectroscopy of Small Molecules<br>C.R. Vidal, P. Klotek, and H. Scheingraber.....                                                                    | 233 |
| <sup>81</sup> Kr Detection Using Resonance Ionization Spectroscopy<br>S.D. Kramer, C.H. Chen, S.L. Allman, G.S. Hurst and<br>B.E. Lehmann.....                                  | 246 |
| Spectroscopic Study of Xe <sub>2</sub> Using VUV Laser Excitation<br>R.H. Lipson, P.E. LaRocque, and B.P. Stoicheff.....                                                        | 253 |
| Vacuum Ultraviolet Photoionization of Cold Molecular Beams<br>J.C. Miller, and R.N. Compton.....                                                                                | 259 |
| Chapter VI. Generation with Electron Beams                                                                                                                                      |     |
| Coherent VUV and Soft X-ray Radiation from Undulators in Modern<br>Storage Rings<br>K-J. Kim, K. Halbach, and D. Attwood.....                                                   | 267 |
| Production of Coherent XUV and Soft X-rays Using a Transverse<br>Optical Klystron<br>R.R. Freemann and B.M. Kincaid.....                                                        | 278 |
| An XUV/VUV Free-Electron Laser Oscillator<br>J.C. Goldstein, B.E. Newnam, R.K. Cooper, and<br>J.C. Comly, Jr.....                                                               | 293 |

|                                                                                                                                                           |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Extreme-Ultraviolet and X-ray Emission and Amplification by<br>Non-relativistic Electron Beams Traversing a Superlattice<br>A.E. Kaplan and S. Datta..... | 304 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

## Chapter VII. Mirrors, Optics and Spectroscopy

|                                                                                                                      |     |
|----------------------------------------------------------------------------------------------------------------------|-----|
| Multilayer Optics for the CUV: Synthesis, Experimental Results, and<br>Projected Performance<br>T.W. Barbee, Jr..... | 311 |
| Mirrors for the Extreme Ultraviolet<br>E. Spiller.....                                                               | 312 |
| VUV Laser Photolithography<br>J.C. White, H.G. Craighead, R.E. Howard, L.D. Jackel,<br>and O.R. Wood, II.....        | 324 |
| Diagnostics for an XUV/Soft X-ray Laser<br>R.L. Kauffman, D.L. Matthews, N. Ceglio, and H. Medeck.....               | 330 |

## Chapter VIII. Upconversion into the XUV

|                                                                                                                                                                      |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Tunable Resonant Enhancement in Nonlinear Optical Frequency Mixing<br>A.V. Smith.....                                                                                | 337 |
| Generation of VUV Radiation in the Kilowatt Power Range Down to<br>130 nm by Stimulated Raman Scattering in Hydrogen<br>H.F. Döbele, M. Röwekamp, and B. Rückle..... | 343 |
| Efficient Generation of Tunable Radiation Below 100 nm in Krypton<br>K.D. Bonin, M.B. Morris, and T.J. McIlrath.....                                                 | 349 |
| Continuously Tunable Sum-Frequency Generation Involving Rydberg<br>States<br>R.W. Boyd, D.J. Gauthier, J. Krasinski, and M.S. Malcuit....                            | 356 |
| Sum Frequency Generation Spectroscopy of Rydberg States<br>A. Schnitzer, K. Hollenberg, and W. Behmenburg.....                                                       | 361 |
| Direct Measurement of a VUV Transition Oscillator Strength in<br>Xenon<br>S.D. Kramer, C.H. Chen, and M.G. Payne.....                                                | 363 |
| High Energy VUV Pulse Generation by Frequency Conversion<br>M.L. Dlabal, J. Reintjes, and L.L. Tankersly.....                                                        | 370 |

## Chapter IX. XUV Lasers

|                                                                                                                                                                             |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Spatial Profiles and Time Evolution of Plasmas which are Candidates<br>for a Soft X-ray Laser<br>C.H. Skinner, C. Keane, H. Milchberg, S. Suckewer, and<br>D. Voorhees..... | 372 |
| Soft X-ray Spectra, Population Inversions and Gains in a Recombining<br>Plasma Column<br>H. Milchberg, J.L. Schwob, C.H. Skinner, S. Suckewer, and<br>D. Voorhees.....      | 379 |
