Advances in
**MICROBIAL
PHYSIOLOGY**

Edited by

A. H. ROSE

*School of Biological Sciences
Bath University, UK*

and

D. W. TEMPEST

*Department of Microbiology
University of Sheffield, UK*

Volume 27

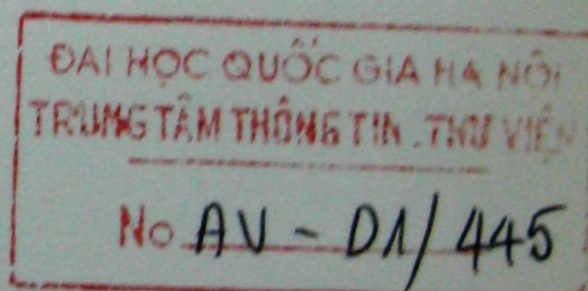

1986

ACADEMIC PRESS

Harcourt Brace Jovanovich, Publishers

London Orlando San Diego New York Austin
Montreal Tokyo Sydney Toronto

Contents

Contributors

v

Mode of Action of Clinically Important Antifungal Drugs D. KERRIDGE

I. Introduction	1
II. The nucleus as the primary target	5
III. The cell membrane as the primary target	19
IV. Finale	57
V. Acknowledgements	63
References	64

Microbial Cyanide Metabolism C. J. KNOWLES and A. W. BUNCH

I. Introduction	73
II. Bacterial cyanide production	74
III. Fungal cyanogenesis	86
IV. Cyanogenesis by photosynthetic micro-organisms	90
V. Cyanide degradation	95
VI. Concluding remarks	105
References	106

Bacterial Oxidation of Methane and Methanol C. ANTHONY

I. Introduction	113
II. Oxidation of methane to methanol	116
III. Oxidation of methanol to formaldehyde	129
IV. Energy transduction during the oxidation of methane and methanol	179
V. Acknowledgements	203
References	203

**Occurrence, Biochemistry and Physiology of
Phenazine Pigment Production**
JOHN M. TURNER and ANN J. MESSENGER

I. Introduction	211
II. Natural occurrence and some properties of phenazines	218
III. Biosynthesis	242
IV. Secondary metabolism and the physiological significance of phenazine production	260
V. Acknowledgements	268
References	268

**Nature and Development of Phenotypic Resistance to
Amphotericin B in *Candida albicans***
ERNEST F. GALE

I. Introduction	278
II. Mode of action of amphotericin	281
III. Assessment of amphotericin sensitivity	283
IV. Interactions between amphotericin, sterols and surface structures of <i>Candida albicans</i>	286
V. Changes in the cell wall during the stationary phase of culture	289
VI. The effects of oxidation and reduction	293
VII. Nature of the cell-wall barrier and its modification by reducing agents	297
VIII. Incorporation of glucose into the (1→3)- β -glucan fraction	303
IX. Actions of analogues of glucose	305
X. Conclusions and in conclusion	316
References	318
Note added in proof	321
Author Index	323
Subject Index	341
