

# An extension of Mazurkiewicz Traces and their applications in specification of real-time systems

Van Chieu D., Van Hung D.

University of Engineering and Technology, Vietnam National University, Hanoi, Viet Nam

**Abstract:** This paper proposes a method for specification of concurrency and timing constraints of real-time systems. The key idea of the proposed method is to extend the Mazurkiewicz Traces with time in order to capture the concurrency and timing constraints among the services of systems. The method is formal, effective for abstracting and supporting automated checking. © 2010 IEEE.

**Author Keywords:** Asynchronous automaton; Distributed automata; Duration automata; Mazurkiewicz trace; Timing constraint

**Index Keywords:** Asynchronous automata; Distributed automata; Duration automata; Mazurkiewicz traces; Timing constraint; Automata theory; Specifications; Systems engineering; Timing circuits; Real time systems
