Contents

Preface	VII
Chapter 1 Introduction	1
1.1 Statistics and the Life Sciences	1
1.2 Examples and Overview	1
Chapter 2 Description of Populations and Samples	9
2.1 Introduction	9
2.2 Frequency Distributions: Techniques for Data	12
2.3 Frequency Distributions: Shapes and Examples	21
2.4 Descriptive Statistics: Measures of Center	26
2.5 Boxplots	32
2.6 Measures of Dispersion	40
2.7 Effect of Transformation of Variables (Optional)	50
2.8 Samples and Populations: Statistical Inference	57
2.9 Perspective	63
Chapter 3 Random Sampling, Probability, and the Binomial Distribution	71
3.1 Probability and the Life Sciences	71
3.2 Random Sampling	71
3.3 Introduction to Probability	78
3.4 Probability Trees	83
3.5 Probability Rules (Optional)	88
3.6 Density Curves	93
3.7 Random Variables	96
3.8 The Binomial Distribution	102
3.9 Fitting a Binomial Distribution to Data (Optional)	112
Chapter 4 The Normal Distribution	119
4.1 Introduction	119
4.2 The Normal Curves	122
4.3 Areas Under a Normal Curve	123
4.4 Assessing Normality	133
4.5 The Continuity Correction (Optional)	141
4.6 Perspective	145

Chapter 5	Sampling Distributions	149
5.1	Basic Ideas	149
5.2	Dichotomous Observations	151
5.3	Quantitative Observations	157
5.4	Illustration of the Central Limit Theorem (Optional)	167
5.5	The Normal Approximation to the Binomial Distribution (Optional)	170
5.6	Perspective	175
Chapter 6	Confidence Intervals	179
6.1	Statistical Estimation	179
6.2	Standard Error of the Mean	180
6.3	Confidence Interval for μ	185
6.4	Planning a Study to Estimate μ	197
6.5	Conditions for Validity of Estimation Methods	199
6.6	Confidence Interval for a Population Proportion	206
6.7	Perspective and Summary	213
Chapter 7	Comparison of Two Independent Samples	219
7.1	Introduction	219
7.2	Standard Error of $(\bar{y}_1 - \bar{y}_2)$	222
7.3	Confidence Interval for $(\mu_1 - \mu_2)$	227
7.4	Hypothesis Testing: The t test	234
7.5	Further Discussion of the t test	248
7.6	One-Tailed t Tests	256
7.7	More on Interpretation of Statistical Significance	266
7.8	Planning for Adequate Power (Optional)	273
7.9	Student's t : Conditions and Summary	280
7.10	More on Principles of Testing Hypotheses	284
7.11	The Wilcoxon-Mann-Whitney Test	288
7.12	Perspective	298
Chapter 8	Statistical Principles of Design	309
8.1	Introduction	309
8.2	Observational Studies	311
8.3	Experiments	317
8.4	Restricted Randomization: Blocking and Stratification	326
8.5	Levels of Replication	334
8.6	Sampling Concerns (Optional)	338
8.7	Perspective	341

Chapter 9	Comparison of Paired Samples	347
9.1	Introduction	347
9.2	The Paired-Sample t test and Confidence Interval	348
9.3	The Paired Design	358
9.4	The Sign Test	364
9.5	The Wilcoxon Signed-Rank Test	372
9.6	Further Considerations in Paired Experiments	377
9.7	Perspective	381
Chapter 10	Analysis of Categorical Data	391
10.1	Inference for Proportions: The Chi-Square Goodness-of-Fit Test	391
10.2	The Chi-Square Test for the 2×2 Contingency Table	402
10.3	Independence and Association in the 2×2 Contingency Table	412
10.4	Fisher's Exact Test (Optional)	422
10.5	The $r \times k$ Contingency Table	428
10.6	Applicability of Methods	434
10.7	Confidence Interval for Difference Between Probabilities	439
10.8	Paired Data and 2×2 Tables (Optional)	441
10.9	Relative Risk and the Odds Ratio (Optional)	444
10.10	Summary of Chi-Square Tests	454
Chapter 11	Comparing the Means of Many Independent Samples	463
11.1	Introduction	463
11.2	The Basic Analysis of Variance	467
11.3	The Analysis of Variance Model (Optional)	476
11.4	The Global F Test	478
11.5	Applicability of Methods	484
11.6	Two-Way ANOVA (Optional)	487
11.7	Linear Combinations of Means (Optional)	498
11.8	Multiple Comparisons (Optional)	507
11.9	Perspective	516
Chapter 12	Linear Regression and Correlation	525
12.1	Introduction	525
12.2	The Fitted Regression Line	527
12.3	Parametric Interpretation of Regression: The Linear Model	541
12.4	Statistical Inference Concerning β_1	548
12.5	The Correlation Coefficient	553
12.6	Guidelines for Interpreting Regression and Correlation	565
12.7	Perspective	576
12.8	Summary of Formulas	586

Chapter 13 A Summary of Inference Methods	595
13.1 Introduction	595
13.2 Data Analysis Examples	597
Chapter Appendices	611
Chapter Notes	633
Statistical Tables	669
1 Random Digits	670
2 Binomial Coefficients nC_j	674
3 Areas Under the Normal Curve	675
4 Critical Values of Student's t Distribution	677
5 Number of Observations for Independent-Samples t Test	678
6 Critical Values of U , the Wilcoxon–Mann–Whitney Statistic	680
7 Critical Values of B for the Sign Test	684
8 Critical Values of W for the Wilcoxon Signed-rank Test	685
9 Critical Values of the Chi-Square Distribution	686
10 Critical Values of the F Distribution	687
11 Critical Constants for the Newman-Keuls Procedure	697
12 Bonferroni Multipliers for 95% Confidence Intervals	699
Answers to Selected Exercises	701
Index	715
Index of Examples	723
