Contents

Preface	xi	4 Physical Weathering, Mass Movement, and Slopes	25
1 Process Geomorphology: An Introduction	1	Introduction	25
Introduction	2	Physical Weathering	25
The Basics of Process Geomorphology	3	Expansion of Rocks and Minerals	27
The Delicate Balance	3	Growth in Voids	33
Force, Process, and Resistance	4	The Significance of Water and Extent of Chemical and Physical Weathering Processes	37
The Ingredients of Balance	4	Physical Properties of	37
Thresholds and Complex Responses	11	Continuously Deformed Rocks	101
The Principle of Process Linkage	17	Shear Deformation	101
The Time Framework	18	Measurement of Strain	102
Summary	20	Mass Movement of Slope Materials	106
SUGGESTED READINGS	20	Mass Wasting Processes	106
2 Internal Forces and Climate	2	Morphology of Mass Movements	120
Introduction	22	Slope Profiles	129
The Endogenic Effect	23	The Rock Climate Influence	130
Epeirogeny	23	Slope Evolution	145
Orogeny and Tectonic Geomorphology	26	Slope Failure Forms	146
Volcanism	34	Summary	147
Climatic Geomorphology	38	SUGGESTED READINGS	147
Climate, Processes, and Landforms	38	5 The Drainage Basin—Development, Morphometry, and Hydrology	149
Climate Change and Geomorphic Response	43	Introduction	150
Summary	45	Hillslope Hydrology and Runoff Generation	151
SUGGESTED READINGS	45	Influences	151
3 Chemical Weathering and Soils	47	Subsurface Seepage and Interrelated Overland Flow	156
Introduction	48	The Stream Hydrograph and Response to Basin Characteristics	157
Decomposition	48	Effects of Physical Basin Characteristics	157
Processes of Decomposition	51	Initiation of Channels and the Drainage Network	161
Moisture	54	Basin Morphometry	166
The End Products of Decomposition	57	Basin Morphometry and the Flood Hydrograph	171
The Rate of Chemical Weathering	61	Basin Evolution	173
Soils	64	Basin Hydrology	176
Soil Properties	64	Subsurface Water	178
Soil Horizon Nomenclature and Description	67	Surface Water	181
Soil Classification	68		
Pedogenic Controls and Regimes	70		
The Factor of Time	77		
Geodynamic Significance of Soils	78		
Summary	83		
SUGGESTED READINGS	83

Contents

Preface	xi		
1 Process Geomorphology: An Introduction	1	4 Physical Weathering, Mass Movement, and Slopes	85
Introduction	2	Introduction	86
The Basics of Process Geomorphology	3	Physical Weathering	86
The Delicate Balance	3	Expansion of Rocks and Minerals	87
Force, Process, and Resistance:		Growth in Voids	93
The Ingredients of Balance	6	The Significance of Water and Interaction of Chemical and Physical Weathering Processes	97
Thresholds and Complex Response	12	Physical Properties of	
The Principle of Process Linkage	17	Unconsolidated Debris	100
The Time Framework	18	Shear Strength	101
Summary	20	Measurement of Strength	105
SUGGESTED READINGS	20	Mass Movements of Slope Materials	106
2 Internal Forces and Climate	21	Slope Stability	107
Introduction	22	Mass Wasting Processes	109
The Endogenic Effect	22	Morphology of Mass Movements	137
Epeirogeny	23	Slope Profiles	139
Orogeny and Tectonic Geomorphology	26	The Rock-Climate Influence	144
Volcanism	34	Slope Evolution	145
Climatic Geomorphology	38	Relict Hillslope Forms	146
Climate, Processes, and Landforms	38	Summary	147
Climate Change and Geomorphic Response	40	SUGGESTED READINGS	147
Summary	45	5 The Drainage Basin—Development, Morphometry, and Hydrology	149
SUGGESTED READINGS	45	Introduction	150
3 Chemical Weathering and Soils	47	Hillslope Hydrology and Runoff Generation	151
Introduction	48	Infiltration	153
Decomposition	48	Subsurface Stormflow and Saturated Overland Flow	156
Processes of Decomposition	51	The Stream Hydrograph and Response to Basin Characteristics	157
Mobility	54	Effects of Physical Basin Characteristics	157
The End Products of Decomposition	57	Initiation of Channels and the Drainage Network	161
The Rate of Chemical Weathering	61	Basin Morphometry	166
Soils	64	Basin Morphometry and the Flood Hydrograph	171
Soil Properties	64	Basin Evolution	173
Soil Horizon Nomenclature and Description	67	Basin Hydrology	176
Soil Classification	68	Subsurface Water	178
Pedogenic Controls and Regimes	70	Surface Water	181
The Factor of Time	77		
Geomorphic Significance of Soils	78		
Summary	83		
SUGGESTED READINGS	83		

Basin Denudation	190			
Slope Erosion and Sediment Yield	190			
Sediment Budgets	205			
Rates of Denudation	206			
Summary	209			
SUGGESTED READINGS	209			
6 Fluvial Processes		211	8 Wind Processes and Landforms	305
Introduction	212		Introduction	306
Flow in Open Channels	212		The Resisting Environment	306
Basic Mechanics	212		Pavements, Soils, and Crusts	308
Flow Equations and Resisting Factors	216		The Driving Force	309
Erosion, Transport, and Deposition	219		Entrainment and Transportation	311
Transportation	219		Processes	311
Entrainment	222		The Effect of Saltation	312
Erosion of Bedrock Channels	225		Erosional Features	314
Bank Erosion	227		Deposits and Features	317
Deposition	230		Ripples	319
The Frequency and Magnitude of			Dunes	320
River Work	231		Fine-Grained Deposits	327
Channel Morphology:			Environmental Considerations	328
The Controlling Factors	234		Summary	331
The Quasi-Equilibrium Condition	234		SUGGESTED READINGS	332
Hydraulic Geometry	234			
Channel Slope	236		9 Glaciers and Glacial Mechanics	333
Channel Shape	238		Introduction	334
Channel Patterns	241		Glacial Origins and Types	334
Straight Channels	241		From Snow to Glacial Ice	334
Meandering Channels	244		Glacial Ice Texture and Fabric	335
Braided Channels	247		Classifying Glaciers	336
Anastomosing and			The Mass Balance	338
Anabranching Channels	249		The Movement of Glaciers	340
The Continuity of Channel Patterns	250		Internal Motion	340
Rivers, Equilibrium, and Time	252		Sliding	346
Adjustment of Gradient	255		Deforming Subglacial Sediments	352
Adjustment of Shape and Pattern	256		Velocity Variations with Time	354
Summary	258		Ice Structures	355
SUGGESTED READINGS	258		Stratification	356
			Secondary Features	356
7 Fluvial Landforms		261	Summary	359
Introduction	262		SUGGESTED READINGS	360
Floodplains	262			
Deposits and Topography	263		10 Glacial Erosion, Deposition,	361
Floodplain Origins	267		and Landforms	
Spatial and Time Considerations	270		Introduction	362
Fluvial Terraces	274		Erosional Processes and Features	362
Types and Classification	274		Minor Subglacial Features	362
The Origin of Terraces	276		Cirques	368
Terrace Origin and the Field Problem	280		Glacial Troughs	372
The Piedmont Environment:				
Fans and Pediments	282			
Alluvial Fans	283			
Pediments	293			

Deposits and Depositional Features 375

- Drift Types 376
- The Depositional Framework 380
- Marginal Ice-Contact Features 383
- Interior Ice-Contact Features 390
- Proglacial Features 395

Summary 398**SUGGESTED READINGS 398****11 Periglacial Processes and Landforms 399****Introduction 400****Permafrost 401**

- Definition and Thermal Characteristics 401
- Distribution, Thickness, and Origin 402
- Hydrology 407
- Pedogenesis in Permafrost Terrain 409

Periglacial Processes 409

- Frost Action 409
- Mass Movements 416

Periglacial Landforms**(and Associated Processes) 420**

- Ground Ice 421
- Patterned Ground 433
- Landforms Associated with Mass Movement 440
- Relict Periglacial Features and Their Significance 454

Environmental and**Engineering Considerations 459**

- Building Foundations 459
- Roads and Airfields 461
- Utilities: Water and Sewage 462
- Pipelines 462
- Applications to Planetary Geology 464

Summary 470**SUGGESTED READINGS 470****12 Karst—Processes and Landforms 471****Introduction 472****Definitions and Characteristics 472****Karst Processes and the****Controlling Factors 474**

- Karst Rocks—The Resisting Framework 474
- The Driving Mechanics and Controls 475

Karst Hydrology 480

- General Characteristics 480
- Groundwater Recharge 481
- Karst Aquifers and Groundwater Flow 482
- Groundwater Discharge 483
- Morphology of Karst Drainage 484

Surficial Landforms 484

- Closed Depressions 487
- Karst Valleys 492
- Cockpit and Tower Karst 494

Limestone Caves 496

- The Origin of Limestone Caves 496
- Cave Physiography 497

Summary 501**SUGGESTED READINGS 501****13 Coastal Processes and Landforms 503****Introduction 504****Coastal Processes 506**

- Waves 507
- Tides and Currents 517

Beaches 523

- The Beach Profile and Equilibrium 524
- Shoreline Configurations and Beach Landforms 535

Coastal Topography 540

- High-Relief, Erosional Shorelines 541
- Low-Relief, Depositional Shorelines 546

Shoreline Change 550

- Rates of Change 550
- Causes of Shoreline Erosion 552

Barrier Islands 557

- Distribution and Characteristics 557
- Geomorphic Processes and Dynamics 563

Summary 569**SUGGESTED READINGS 569****Bibliography 571****Index 641**
