From reading the book, readers are provided with knowledge of management accounting needed for future enterprise managers. Specifically, it touches a variety of aspects in expense management by an enterprise such as cost classification, cost identification, cost distribution, cost analysis, and cost estimation. In addition, readers are also introduced of how to define prices of products and relevant services to be sold; what information should be gathered to make effective decisions for short-term business and long-term investment.

The Vietnam is integrating itself in the world economy as so the business management has become more important than ever. Regarding business management, managers must know to coordinate, organize business activities, etc... in order to manage the enterprises for the highest economic efficiency. This book is a greatly useful source for students of undergraduate and graduate economic programs who are specialized in enterprise management.
